Dear Customer,

## **We're reducing sewer inundation and foul flooding in your area**

From late July, we're carrying out work in your local area to address the infiltration of surface water and ground water into the Hellingly sewer network.

### **Open Meeting – You're invited!**

This letter explains our upcoming work in your area, but if you are interested in more detailed information, we will be giving a presentation on:

**Date:** Tuesday, July 9, 2024

**Time:** 5.30-7.30pm

**Location:** Hellingly Community Hub, The Drive, Hellingly, BN27 4EP

We'll be going through our plans, why we're doing this work, expected dates and times and explain how it might affect you and what we'll be doing to reduce the impact of that.

We'll also be asking for your thoughts and local insight as we'd like to be aware of any other works, community events, or summer fairs.

### **What are we doing?**

We'll reline up to 2444m of the public sewer to solve the groundwater infiltration issues within the sewer pipes. We are also looking into sealing or re-covering up to 139 selected manholes under the flood line to address the entry of surface water into the foul sewer via manholes.

We will put new flow monitors into our sewer network so that we can assess the impact of flows from new developments on the foul sewer network.

Before we start work, we'll write to you again to tell you about the traffic management and how the work might affect you.
